

## Fitter / Installer / Mechanical Engineer

 **Location:** Seroki-Parcela / Hybrid

 **Contract type:** Employment contract, B2B, or contract for specific work

### Job Description:

We are seeking an experienced technological installations specialist responsible for assembling piping systems, equipment, and industrial structures.

The candidate will be involved in the implementation of advanced technological systems within the field of environmental engineering, ensuring precision and efficiency in every project.

### About us:

Bio-Proces is a Polish company with a strong market position, offering a wide range of products and services related to biogas and wastewater treatment, among other areas.

### Scope of Responsibilities:

- Assembly of technological installations, pipelines, and industrial equipment.
- Mechanical and installation work at industrial sites.
- Collaboration with the implementation team in deploying new projects.
- Quality control of completed work according to technical documentation.
- Mechanical servicing of installations.
- Compliance with health and safety regulations and technological standards.

### Requirements:

- Experience in assembling technological installations.
- Ability to work with pipelines and industrial equipment.
- Basic knowledge of technical drawing interpretation.
- Teamwork skills and ability to work independently.
- Willingness to travel, category B driving license.

### We Offer:

- ✓ Stable employment in a rapidly growing company.
- ✓ Opportunities for professional development and acquiring new skills.
- ✓ Necessary work tools.
- ✓ A friendly work atmosphere and team support.
- ✓ Flexible working hours depending on the project.

 If you're ready for new challenges, we look forward to your application!
